FRONT-END DEVELOPMENT

ASSIGNMENT 2

Problem Statement

Simple Event Registration Page – Styling with CSS

Small events such as workshops, seminars, and college programs need a simple and visually appealing way to collect participant details.
In **Assignment-1**, you created the structure using HTML.
In **Assignment-2**, you will enhance the same page using **CSS** to improve layout, readability, and user experience — without adding backend functionality.

Level-2: Presentation & Layout (CSS Implementation)

Objective

Apply CSS to transform the basic HTML page into a clean, professional-looking registration interface.

Requirements

1. Apply Global Styling

Style the overall page for a consistent appearance.

- Set a **pleasant background color or gradient** for the page.
- Choose a readable **font family** (e.g., Arial, Verdana, sans-serif).
- Add spacing using **margin and padding**.
- Maintain consistent **text alignment and colors**.

---

2. Style the Event Title and Description

Make the header section visually prominent.

- Increase heading size and apply a distinct color.

- Add spacing below the title.
- Highlight the description using line-height for readability.
- Optionally add a subtle divider line.

---

3. Design the Event Information Section

Improve the list/table displaying:

- Event Date
- Time
- Venue
- Organizer Name

Styling Expectations:

- Add borders and spacing.
- Use background shading for better separation.
- Align text neatly.
- Apply hover effect (optional).

---

4. Enhance the Registration Form Layout

Form Container

- Place the form inside a **centered card-style layout**.
- Add:
  - Border
  - Padding
  - Rounded corners (border-radius)
  - Light box-shadow

Field Alignment

- Ensure labels and inputs are properly spaced.
- Inputs should have:
  - Uniform width
  - Padding for usability
  - Consistent margins

---

5. Style Fieldsets and Legends

Since Assignment-1 grouped data using fieldset and legend, now improve them visually.

- Add border and internal spacing.
- Highlight the legend with:
  - Bold text
  - Slight background color
  - Padding

---

6. Improve Input Elements

Style all form controls:

Element	Styling Requirement
Textboxes	Add padding, border-radius
Dropdown	Match other input styles
Radio/Checkbox	Provide spacing between options
File Upload	Align with other inputs
Textarea	Allow comfortable height

Element	Styling Requirement
Focus Effect	Change border color when selected

---

7. Button Styling (Important)

Design attractive buttons for:

- **Submit**
- **Reset**

Expected Styles:

- Background color
- Padding
- Rounded edges
- Cursor pointer
- Hover effect (color change)
- Slight shadow or transition effect

---

8. Style the Participants Table (Static Section)

Enhance the placeholder table created in Assignment-1.

- Add borders and collapse them neatly.
- Use header background color.
- Alternate row coloring (zebra stripes).
- Add hover highlight effect.

---

9. Style the Declaration Checkbox Section

Make the declaration noticeable but not distracting.

- Add spacing above it.

- Align checkbox with label text.
- Slightly reduce font size for subtle emphasis.

---

10. Footer Design

Create a clean footer section containing:

- Contact Email
- Help Desk Number
- Copyright

Styling Requirements:

- Add background color different from main page.
- Center align text.
- Provide padding.
- Use smaller font size.
- Add top margin to separate from form.

Suggested CSS Concepts to Use

Students should demonstrate usage of:

- Selectors (element, class, id)
- Box model (margin, border, padding)
- Colors & backgrounds
- Typography (font-size, font-family)
- Alignment and spacing
- border-radius
- box-shadow
- hover effects

- Table styling
- Form styling
- Basic responsive thinking (optional bonus)

Expected Outcome

By the end of Assignment-2:

- The plain HTML page becomes a **well-designed user interface**.
- The layout is structured, readable, and visually balanced.
- Students understand how CSS controls **presentation without changing functionality**.

Deliverables

Students must submit:

1. index.html (updated HTML from Assignment-1)
2. style.css (external stylesheet — mandatory)
3. Screenshots of the styled page
4. Proper folder structure
